

Digital Design and Computer Organization	
Course Code: IS32	Credits: 3:0:1
Pre – requisite: Basic Electronics	Contact Hours: 45L+30P+45S
Course Coordinator: Dr. Anitha K	

Course Content

Unit I

Introduction to Digital Design: Introduction to binary logic, basic theorems, Boolean functions and simplification. The Map Method for simplifying Boolean expressions, Two, Three and Four-Variable Map, Don't-Care Conditions, NAND and NOR Implementation, Exclusive-OR Function, Hardware Description Language – Verilog code for simple circuits.

- Pedagogy/Course Delivery tools: Chalk and talk, Power Point Presentation
- Link: https://onlinecourses.nptel.ac.in/noc24_cs61
- Lab Session: Verilog codes for combinational logic circuits

Unit II

Combinational Logic: Introduction, Design Procedure, Binary Adders-subtractor, Decoders, Encoders, Multiplexers and Demultiplexers. HDL for Combinational Circuits.

Sequential Logic: Introduction, Sequential Circuits, Storage Elements: SR, JK, D and T Flip-Flops (only block diagram approach), Function tables and Characteristics equation of all 4 FFs. Mod-8 Asynchronous counter using T FF and Mod-5 Synchronous Counter with design. HDL for Sequential logic Circuits.

- Pedagogy/Course Delivery tools: Chalk and talk, Power Point Presentation
- Link: <https://edurev.in/p/155137/Combinational-Circuits>
- Link: <https://dec-iitkgp.vlabs.ac.in/exp/sequential-circuits/theory.html>
- Lab Session: Verilog program for Adder and Subtractor.
Verilog program for Decoders and Encoders.

Unit III

Basic Structure of Computers: Functional Units, Basic Operational Concepts, Bus structure, Performance – Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Memory Location and Addresses, Memory Operations, Instructions and Instruction sequencing, Addressing Modes.

- Pedagogy/Course Delivery tools: Chalk and talk, Power Point Presentation
- Link: https://onlinecourses.nptel.ac.in/noc20_cs64
- Lab Session: Instruction Execution using Marie Simulator.
ALU design using Logisim simulator.

Unit IV

Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Direct Memory Access: Bus Arbitration, The memory System: Basic Concepts, Speed, size and Cost of memory systems. Cache Memories – Mapping Functions.

- Pedagogy/Course Delivery tools: Chalk and talk, Power Point Presentation
- Link: https://onlinecourses.nptel.ac.in/noc20_cs64
- Lab Session: Memory operation using Logisim simulator.
-

Unit V

Basic Processing Unit: Some Fundamental Concepts: Register Transfers, Performing ALU operations, fetching a word from Memory, Storing a word in memory. Execution of a Complete Instruction. Pipelining: Basic concepts, Role of Cache memory, Pipeline Performance.

- Pedagogy/Course Delivery tools: Chalk and talk, Power Point Presentation
- Link: https://onlinecourses.nptel.ac.in/noc20_cs64
- Lab Session: Pipelining demonstration using CPU-OS simulator.

List of Simulation Programs:

1. Verilog codes for combinational logic circuits.
2. Verilog program for Adder and Subtractor.
3. Verilog program for Decoders and Encoders.
4. Verilog program for Multiplexer and Demultiplexer.
5. Verilog program for flip flops.
6. Instruction Execution using Marie Simulator.
7. ALU design using Logisim simulator.
8. Memory operation using Logisim simulator.
9. Pipelining demonstration using CPU-OS simulator.

Text Books:

1. M. Morris Mano & Michael D. Ciletti, Digital Design with an Introduction to Verilog Design, 6e, Pearson Education, 2018.
2. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Computer Organization, 5th Edition, Tata McGraw Hill, 2002

Reference Books:

1. Donald P Leach, Albert Paul Malvino and Goutam Saha, Digital Principles and Applications, 8th Edition, 2024, Tata McGraw Hill.
2. Stephen Brown, Zvonko Vranesic, Digital Logic Design with VHDL, Third Edition, 2008, Tata McGraw Hill.

Course outcomes (COs):

At the end of the course, the student will be able to:

1. Apply various simplification techniques to realize digital circuits using basic and universal gates. (PO1,2,3,5,9,10 & PSO2)
2. Design different types of combinational and sequential circuits to develop digital system. (PO1,2,3,4,5,9,10, PSO2)
3. Describe the fundamentals of machine instructions, addressing modes to evaluate Processor performance. (PO1 & PSO2)
4. Understand the various methods used for communication between processor and I/O devices for data and control flow. (PO1 & PSO2)
5. Analyse internal Organization of Main Memory/Cache to evaluate Processor Performance. (PO1,2 & PSO2)

Web links and Video Lectures (e-Resources):

- <https://nptel.ac.in/courses/106105185>

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Coding Demo
- S* Self-learning-S

Unit No.	Assignment Problems
I	For the following scenarios build the logic circuits (Separately) 1. An AI chatbot adjusts its response tone based on user mood and time of day. 2. An AI sensor system monitors four safe conditions 3. Build an alert system using NOR gates 4. An AI compares two 4 bit patterns for image recognition
II	For the following scenarios build the logic circuits (Separately) 1. An AI selects one of the AI decision model based on weather conditions 2. An AI robot receives 3 bit code input to select any one of its 6 actions 3. An AI system generates compact binary code for multiple signal inputs 4. Build a digital system that samples a data every 8 seconds 5. AI scheduler rotates between its 5 tasks in cycle
III	Calculate performance 1. An edge device runs a ML model for real-time object detection 2. Two processors run the same ML model but have different clock rates
IV	Design a block diagram 1. An embedded AI device receives inputs from camera and microphone at the same time 2. An LLM deployed on a multi-level memory accesses matrix data and user input data frequently from the memory (Hint use Cache memory)
V	Write the register transfer sequence when: A CPU executes a matrix multiplication for a single layer of a neural network.

Course Assessment and Evaluation:

Continuous Internal Evaluation: 50 Marks		
Assessment Tool	Marks	Course Outcomes addressed
Internal test-I	30	CO1, CO2, CO3
Internal test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other components	Marks	Course Outcomes addressed
Lab programs, Weekly Evaluation and Record	10	CO1, CO2, CO3, CO4, CO5
Lab test	10	CO1, CO2, CO3, CO4, CO5
Semester End Examination	100	CO1, CO2, CO3, CO4, CO5

Data Structures	
Course Code: IS33	Credits: 3:0:0
Pre – requisites: Fundamentals of Computing	Contact Hours: 45L+45S
Course Coordinator: Dr. Kusuma S	

Course Content

Unit I

Introduction to Data Structures: Definition, Classification, Pointers and Dynamic memory allocation, Arrays, Dynamic Allocated Arrays, Structures, Polynomial.

The Stack: Definition, Representation, ADT, Basic operations of Stack and its implementation, Stacks using Dynamic Arrays. Applications of stack: Conversion from Infix to Postfix, Evaluation of Postfix expression.

- **Pedagogy/Course Delivery tools:** Chalk-and-talk and Multimedia presentations, and Code walk-through sessions.
- **Links:** <https://nptel.ac.in/courses/106106133>,
<https://nptel.ac.in/courses/106102064>
<https://nptel.ac.in/courses/106106127>
- **Impartus recording:** <https://a.impartus.com/ilc/#/course/82972/295>

Unit II

Recursion: Definition, Process and programming examples (Tower of Hanoi, Factorial, binary search), Role of Stack in recursion(factorial and Fibonacci).

Queues: Definition, Representation, ADT, Primitive operations of queue and its implementation; Circular queues using Dynamic Arrays, Single and Double-Ended Priority queues, Multiple Stacks and Queues.

- **Pedagogy/Course Delivery tools:** Chalk-and-talk and Multimedia presentations, and Code walk-through sessions.
- **Links:** <https://nptel.ac.in/courses/106106133>,

<https://nptel.ac.in/courses/106106127>
- **Impartus recording:** <https://a.impartus.com/ilc/#/course/82972/295>

Unit IV

Trees: Introduction, Binary Trees, Binary Tree Traversals, Binary Search Tree- Definition, searching, insertion, deletion, joining and splitting, height of a binary search tree

Graphs: Introduction, Definition and Graph Representations.

- **Pedagogy/Course Delivery tools:** Chalk-and-talk and Multimedia presentations, and Code walk-through sessions.
- **Links:** <https://nptel.ac.in/courses/106106133>,

- **Impartus recording:** <https://a.impartus.com/ilc/#/course/82972/295>

Unit V

Hashing: Introduction, Static Hashing, Dynamic Hashing

Multiway Search Trees: B-Trees :Definition, properties, number of elements in B-Tree, insertion and deletion. **B+ Trees:** Definition, searching, insertion and deletion

- **Pedagogy/Course Delivery tools:** Chalk-and-talk and Multimedia presentations, and Code walk-through sessions.
- **Links:** <https://nptel.ac.in/courses/106106133>,
<https://nptel.ac.in/courses/106102064>

Text Book:

1. Fundamentals of Data Structures in C by Ellis Horowitz, Sartaj Sahni, and Susan Anderson-Freed, 2nd Edition, Universities Press, 2023, ISBN: 9788173716058

Reference Books:

1. Aaron M. Tanenbaum, Yedidyah Langsam and Moshe J. Augenstein, “Data Structures Using C”, 2nd Edition, PHI, 2009.
2. Michael J. Folk, Bill Zoellick and Greg Riccardi, “File Structures-An Object Oriented Approach with C++”, Pearson Education, 2004
3. Seymour Lipschutz, Data Structures Schaum's Outlines, Revised 1st Ed, McGraw Hill, 2014.
4. Gilberg & Forouzan, Data Structures: A Pseudo-code approach with C, 2nd Ed, Cengage Learning, 2014.
5. Reema Thareja, “Data Structures using C”, 3rd Ed, Oxford press, 2012.
6. Jean-Paul Tremblay & Paul G. Sorenson, An Introduction to Data Structures with Applications, 2nd Ed, McGraw Hill, 2013

Self-Learning - GATE oriented aptitude test, Programming Assignment

Course Outcomes(COs):

At the end of the course, the student will be able to:

1. Apply LIFO principle for stack related problems (PO1, PO2, PO3, PO9, PO10 & PSO1)
2. Analyse the importance of queue data structure and its types for solving real-world problems. (PO1, PO2, PO3, PO9, PO10 & PSO1)
3. Design an effective solution for a given problem using linked list. (PO1, PO2, PO3, PO8, PO9, PO10, PO11 & PSO1)
4. Apply nonlinear data structures to perform various operations on data (PO1, PO2, PO3, PO8, PO9, PO10, PO11 & PSO1)
5. Apply hashing techniques for efficient storage and retrieval of data. (PO1, PO2, PO3, PO8, PO9, PO10, PO11 & PSO1)

Course Assessment and Evaluation :

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Gate Based Aptitude Test	10	CO1, CO2, CO3, CO4, CO5
Programming Assignment	10	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

Operating System	
Course Code: IS34	Credits: 3:0:0
Pre – requisites: NIL	Contact Hours: 45L+45S
Course Coordinator: Dr.Jagadeesh Sai D	

Course Contents

Unit 1

Operating Systems Overview: Operating System Structure, Operating System Operations, Process Management, Memory Management, Storage Management, Protection and Security. Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication, Process Scheduling: Basic Concepts, Scheduling Criteria -Scheduling Algorithms, Threads.

Pedagogy: Conceptual Learning using NPTEL video lectures and problem-solving sessions

Links: <https://archive.nptel.ac.in/courses/106/105/106105214/>.

Unit 2

Synchronization: Background, The Critical-Section Problem and its solutions, Synchronization Scheduling Algorithms, Semaphores Classic Problems of Synchronization, Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock detection, Recovery from deadlock.

Pedagogy: Analytical Learning through NPTEL videos, illustrative case problems, and algorithm tracing

Links: <https://archive.nptel.ac.in/courses/106/105/106105214/>

Unit 3

Memory-Management Strategies: Background, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table. Virtual-Memory Management: Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames.

Pedagogy: Visualization-based Learning with animated NPTEL videos and hands-on paging examples.

Links: <https://archive.nptel.ac.in/courses/106/105/106105214/>

Unit 4

File System: File Concept, Access Methods, Directory and Disk Structure, File System Mounting, File Sharing, Implementing File Systems: File, System Structure, File-System Implementation, Allocation Methods, Free space Management.

Pedagogy: Visualization-based Learning with animated NPTEL videos and hands-on paging examples

Links: <https://archive.nptel.ac.in/courses/106/105/106105214/>

Unit 5

Mass Storage Structure: Overview, Disk Structure, Disk Attachment, Disk Scheduling. System Protection: Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Access Control.

Pedagogy: Real-world Case-based Learning with NPTEL content and practical protection scenario discussions

Links: <https://archive.nptel.ac.in/courses/106/102/106102132/>

Text Books:

1. Operating System Concepts, 10th Edition by Abraham Silberschatz, Greg Gagne, Peter B. Galvin. 2022 Wiley Publications.

Reference Books:

1. Modern Operating Systems, 4th Edition by Andrew S. Tanenbaum, Herbert Bos. 2021, Pearson.

2. Operating Systems: Internals and Design Principles, 9th Edition by William Stallings. 2021, Pearson.

Self-Learning: Case Study on Linux

Linux Architecture – Kernel vs Shell, System Boot Process

Process Management in Linux – ps, top, nice, kill, process creation using fork, exec

Synchronization in Linux – Semaphores, inter-process communication (ipcs, ipcrm), race conditions

Memory Management – Use of free, vmstat, /proc/meminfo, paging, virtual memory

File System Structure – Linux file hierarchy, df, du, permissions (chmod, chown, setfacl)

Storage Management – Disk scheduling via iostat, partitioning with fdisk, filesystem mounting

Security & Protection – User/group management, access control via ACLs (getfacl, setfacl).

Course Outcomes:

CO1: Understand the structure and functionality of the operating system and apply CPU scheduling algorithms for the given problem. (PO1, PO2, PO3, PO9, PO10, PO11, PSO2)

CO2. Analyze the various algorithms for process synchronization and deadlock handling. (PO1, PO2, PSO2)

CO3. Apply the various techniques for memory management. (PO1, PO2, PO3, PO9, PO10, PO11, PSO2)

CO4. Understand file and secondary storage management strategies. (PO1, PO2, PO9, PO10, PO11, PSO2)

CO5. Describe the need for information protection mechanisms and the working of modern operating system (PO1, PSO2)

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Quiz	20	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

Discrete Mathematical Structures	
Course Code: IS35	Credits: 2:1:0
Pre – requisites: Nil	Contact Hours: 30L + 30T+30S
Course Coordinator: Mrs. Prathima M. N.	

Course Content

Unit I

Fundamentals: Sets and subsets, operations on sets, Sequences. Logic: Propositions and Logical Operations, Conditional statements, Methods of proof.

- **Pedagogy/Course Delivery tools:** Chalk and talk, Power Point Presentation
- **Recommended Resources / Links:**
<https://nptel.ac.in/courses/106106094>
<https://a.impartus.com/ilc/#/course/107790/533>

Unit II

Relations and Digraphs: Product sets and partitions, Relations and digraphs, Paths in relations and digraphs, Properties of relations, Equivalence relations, Operations on relations, Transitive closure and Warshall's algorithm.

- **Pedagogy/Course Delivery tools:** Chalk and talk, Power Point Presentation
- **Recommended Resources / Links:**
<https://nptel.ac.in/courses/106106094>
<https://a.impartus.com/ilc/#/course/107790/533>

Unit III

Functions: Types of Functions, Functions for computer science, Permutation functions, POSETS: Order relations and structures: Extremal elements of partially ordered sets, Lattices.

- **Pedagogy/Course Delivery tools:** Chalk and talk, Power Point Presentation
- **Recommended Resources / Links:**
<https://nptel.ac.in/courses/106106094>
<https://a.impartus.com/ilc/#/course/107790/533>

Unit IV

Graphs: Graphs, Graph terminology and special types of graphs, Representing graphs and graph isomorphism, connectivity, Euler and Hamilton paths.

- **Pedagogy/Course Delivery tools:** Chalk and talk, Power Point Presentation
- **Recommended Resources / Links:**
<https://nptel.ac.in/courses/106106094>
<https://a.impartus.com/ilc/#/course/107790/533>

Unit V

Semigroups and Groups: Binary operations revisited: Tables, Semigroups: Sub semigroup, Sub monoid, Isomorphism, Homomorphism, Groups.

- **Pedagogy/Course Delivery tools:** Chalk and talk, Power Point Presentation
- **Recommended Resources / Links:**
<https://nptel.ac.in/courses/106106094>
<https://a.impartus.com/ilc/#/course/107790/533>

Tutorial Sessions: (Problems will be solved on the following topics)

1. Sets and set operations.
2. Sequence formulas and recognition of regular expressions.
3. Logical operator's application and verification through proof techniques.
4. Relations and their digraph representations.
5. Problems involving operations on relations
6. Symmetric closures, transitive closure, and Warshall's algorithm.
7. Functions and exploring their applications in Computer Science.
8. Partially ordered sets, constructing Hasse diagrams, and topological sorting.
9. Lattices through Hasse diagram methods and their types.
10. Graph terminologies and graphical models.
11. Eulerian and Hamiltonian paths/circuits.
12. Verification of group properties.
13. Semigroups, sub-semigroups and sub-monoids.
14. Isomorphisms and homomorphisms

Text Books:

1. Bernard Kolman, Robert C. Busby, Sharon Cutler Ross, Discrete Mathematical Structures, 6th edition, PHI, 2015.
2. Kenneth H Rosen, Discrete Mathematics and its applications, 8th Edition, Tata McGraw-Hill.2021

Reference Books:

1. Ralph P.Grimaldi, B.V Ramana, Discrete and Combinatorial Mathematics, Fifth edition.
2. J.P.Trembly, R. Manohar, Discrete mathematical structures with applications to Computer Science, McGraw Hill

Self-Learning: Problem Solving and Quiz.

Course Outcomes(COs):

At the end of the course, students will be able to:

1. Apply the concepts of set theory and logical reasoning to verify the correctness of mathematical statements (PO-1,2,9,11 & PSO-1)
2. Analyze the properties and operations of relations in solving various problems. (PO-1,2,9,11 & PSO-1)
3. Understanding the concepts of functions and partially ordered sets for solving the given problem. (PO-1,2,9,11 & PSO-1)
4. Apply the graph theory concepts in solving computational problems. (PO-1,2,9,11 & PSO-1)
5. Apply the concepts of groups for binary operations. (PO-1,2,9,11 & PSO-1)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Quiz/Case Study	10	CO1, CO2, CO3, CO4, CO5
Tutorial	10	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

DATA STRUCTURES LAB	
Course Code: ISL36	Credits: 0:0:1
Pre – requisites: Fundamentals of Computing	Contact Hours: 30P
Course Coordinator: Dr. Kusuma S	

Course Contents

Unit 1

List of Experiments:

1. Write a C program to store and manage a list of records (e.g., patients, students, or employees) using structures, pointers, and dynamic memory allocation. Allow the user to add, view, and search records. Use malloc(), realloc(), and free() for memory management..
2. Write a program to illustrate forward and backward surfing in the web browser using stack(Array implementation). Display the appropriate messages in case of exceptions.
3. Write a program to convert and print a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and binary operators + - * /. Apply the concept of stack data structure to solve this problem.
4. Write a program to evaluate a valid postfix expression using stack. Assume that the postfix expression is read as a single line consisting of non-negative single digit operands and binary operators. The operators are + - * and /.
5. A call center phone system has to hold the phone calls from customers and provide service based on the arrival time of the calls. Write a C program to simulate this system using queue data structure. Program should have options to add and remove the phone calls in appropriate order for their service.
6. Write a program to demonstrate round robin processor scheduling using circular queue (array Implementation) with suitable inputs. Program should have options to add, remove and display Elements of the queue.
7. Write a program to illustrate memory allocation to files based on their size using singly linked list. Program must support the following operations on a singly linked list. a. Inserting a node b. Deleting a node c. Display
8. Design, Develop and Implement a Program in C for the following operations on Singly Circular Linked List (SCLL) with header nodes
 - a. Represent and Evaluate a Polynomial $P(x,y,z) = 6x^2y^2z^4yz^5 + 3x^3yz + 2xy^5z - 2xyz^3$
 - b. Find the sum of two polynomials POLY1(x,y,z) and POLY2(x,y,z) and store the result in POLYSUM(x,y,z). Support the program with appropriate functions for each of the above operations
9. Write a program to illustrate memory allocation to files based on their size using doubly linked list. Program must support the following operations on a doubly linked list. a. Inserting a node b. Deleting a node c. Display
10. Write a program to illustrate forward and backward surfing in the web browser using stack (Linked List implementation). Display the appropriate messages in case of exceptions.

11. Write a program to implement Queue Data Structure (Linked List implementation). Display the appropriate messages in case of exceptions.
12. A hospital database consists of CT images of patients. The physician wants to query the image database and retrieve most similar images which **are** referred as numbers. In order to support this facility implement database indexing using binary search tree and preorder traversal method.

5. Jean-Paul Tremblay & Paul G. Sorenson, An Introduction to Data Structures with Applications, 2nd Ed, McGraw Hill, 2013

Course Outcomes:

At the end of the course, the student will be able to:

At the end of the course the student will be able to:

1. Design the experiment for the given problem using Data Structures concepts. (PO1, PO2, PO3, PO8, PO9, PSO1)
2. Develop the solution for the given real world problem. (PO1, PO2, PO3, PO4, PO8, PO9, PSO1)
3. Analyze the results and produce substantial written documentation (PO1, PO2, PO4, PO8, PO9, PSO1)

Self-Learning

- Programming assignment through LEET code.

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3
Other Components		
Conduction, Record and Viva	30	CO1, CO2, CO3
Semester-End Examination (SEE)	50	CO1, CO2, CO3

Unix System Programming Lab	
Course Code: ISL37	Credits: 0:0:1
Pre – requisites: Nil	Contact Hours: 30P
Course Coordinator: Dr. Yogish H K	

Course Content

Part – A

1. Write a shell program that creates a student database file sdb.txt, which consists of sid, sname, ssem, dept. Display only Student Name, Department, and frequency of occurrences of students belonging to respective departments.
2. Write a shell program which takes two file names as command line arguments, if their contents are the same then remove the second file.
3. Write a shell program that takes a filename as a command line argument and reports whether it is a directory, a regular, a character device, a block device, a link or a pipe file.
4. Write a shell program that accepts one or more file names as arguments and converts all of them to uppercase, provided they exist in the current directory.
5. Write a shell script that accepts two file names as command line arguments, checks if the permissions for these files are identical and if the permissions are identical, output common permission and otherwise output each file name followed by its permissions.
6. Write a shell program to do the followings on strings, find length of a string, whether string is NULL, and two strings are equal or not.
7. Write a shell program to print the command line arguments in reverse order.
8. Write a shell program to print the given number in reversed order.
9. Write a shell program to print the first 25 Fibonacci numbers.
10. Write a shell program to print the prime numbers between the specified range.
11. Write a shell program to search the given key element using linear search.
12. Write a shell program to find the largest of three numbers using a user defined function.

PART- B

1. Write a C/C++ program to implement UNIX commands ln, mv, rm commands using APIs.
2. Write a program in C/C++ to display the contents of a named file on the standard output device and write to another file.
3. Write a C/C++ program that reads every 100th byte from the named file, where the file name is given as a command-line argument.
4. Write a C/C++ program to display information of a given file which determines type of file and Inode number, where the file name is given as command line argument.
5. Write a C/C++ program to create a process by using fork () and vfork () system call.
6. Write a C/C++ program to demonstrate the process is Zombie and to avoid the Zombie process.
7. Write a C/C++ program to create and demonstrate Orphan Process.
8. Write a C/C++ program to demonstrate a parent process that uses wait () system call to catch the child's exit code.
9. Write a C/C++ Program to demonstrate race condition.
10. Write a C/C++ program to implement UNIX system () Function, using APIs.
11. Write a C/C++ program to catch, ignore and accept the signal - SIGINT.
12. Write a C/C++ program to create a pipe from the parent to child and send data down the pipe.

Text Books:

1. Sumitabha Das., Unix Concepts and Applications., 4th Edition., Tata McGraw Hill , 2017
2. W. Richard Stevens: Advanced Programming in the UNIX Environment, 2nd Edition, Pearson Education.

Reference Books:

1. Unix System Programming Using C++ - Terrence Chan, PHI,
2. M.G. Venkatesh Murthy: UNIX & Shell Programming, Pearson.

Course Outcomes (COs):

At the end of the course the student will be able to:

1. Design Shell Scripts to solve given real word modules. (PO1, PO2, PO3, PO9, PO10, PSO1)
2. Apply an appropriate APIs to handle various file related operations. (PO1, PO2, PO3, PO4, PO5, PSO1)
3. Apply an appropriate APIs to manage and control the processes. (PO1, PO2, PO3, PO4, PO5, PSO1)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3
Other Components		
Conduction, Calculation, Record and Viva	30	CO1, CO2, CO3
Semester-End Examination (SEE)	50	CO1, CO2, CO3

Numerical Analysis with Python	
Course Code: ISAEC393	Credits: 1:0:0
Pre – requisites: Nil	Contact Hours: 15L+15S
Course Coordinator: Dr. Krishnaraj P M	

Course Content

Unit I

Introduction to Python: Overview of Python, basic syntax, Variables, data types, and operators, Control structures (if statements, loops) and functions.

- **Pedagogy:** Conceptual Learning using NPTEL video lectures and problem-solving sessions
- **Recommended Resources / Links:** <https://nptel.ac.in/courses/106106212>

Unit II

Numpy: Creating Arrays, Indexing and Slicing, Data Type Objects, dtype.

- **Pedagogy:** Analytical Learning through NPTEL videos, illustrative case problems, and algorithm tracing
- **Recommended Resources / Links:** <https://nptel.ac.in/courses/106106212>

Unit III

Numpy Arrays: Numerical Operations on Numpy, Arrays Concatenating, Flattening and Adding Dimensions Boolean Indexing.

- **Pedagogy:** Visualization-based Learning with animated NPTEL videos and hands-on paging examples
- **Recommended Resources / Links:** <https://nptel.ac.in/courses/106106212>

Unit IV

Matplotlib : Line plot, bar plot , histograms, scatter plots, label on axes, multiple plots Pandas: Series Data Structure – Introduction , Indexing, Pandas.Series.Apply

- **Pedagogy:** Structure-oriented Learning using NPTEL lectures and whiteboard implementation exercises
- **Recommended Resources / Links:** <https://nptel.ac.in/courses/106106212>

Unit V

Pandas: Filtering, creating series from dictionaries, Dataframe: need of Dataframes, Dataframes from dictionaries, accessing rows , accessing columns, rearranging, sorting, adding rows and columns.

- **Pedagogy:** Real-world Case-based Learning with NPTEL content and practical scenario discussions
- **Recommended Resources / Links:** <https://nptel.ac.in/courses/106106212>

Self-Learning:

Case Study: Analyze a real-world dataset using Pandas to demonstrate data filtering and analysis techniques.

Mini-Project: Develop a Python script to perform a numerical analysis task, such as plotting a function or solving a system of equations, and visualize the results using Matplotlib.

Text Book:

1. Data Analysis: Numpy, Matplotlib and Pandas, Bernd Klein, 2024.

Reference Book:

1. Automate the boring stuff with python: Practical programming for total beginners, Al Sweigart, 2015.

Course Outcomes (COs):

At the end of the course, the student will be able to:

1. Understand the fundamental concepts of Python programming, including syntax, data types, and control structures, for numerical problem-solving. (PO1, PO2, PO4, PSO1)
2. Apply the NumPy library to perform efficient numerical operations and manipulations on multi-dimensional arrays. (PO1, PO2, PO5, PSO1)
3. Utilize the Matplotlib library to visualize data and the results of numerical analyses through various plot types. (PO1, PO3, PO5, PSO3)
4. Master the Pandas library for effective data handling, filtering, and analysis of structured data. (PO1, PO3, PO5, PSO3)
5. Integrate Python's libraries to solve complex numerical problems and present the findings through clear data visualizations. (PO1, PO3, PO5, PSO1)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Course Project	10	CO1, CO2, CO3, CO4, CO5
Report	10	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

MICROCONTROLLERS	
Course Code: IS42	Credits: 3:0:1
Pre – requisites: Computer Organization and Architecture	Contact Hours: 45L + 30P+45S
Course Coordinator: Mr. Prashanth Kambli	

Course Contents

Unit 1

ARM Embedded Systems, RISC design philosophy, ARM design philosophy, Introduction to Embedded systems, Design of Embedded Systems, Applications, Embedded processors, Operating System, Connectivity. Internal Components of System-on-chip, General Microprocessor unit, MCU PIN diagram, Timers and Counters, Pulse width modulator.

Pedagogy: Conceptual Learning using NPTEL video lectures and problem-solving sessions

Recommended Resources / Links:

1. Introduction to Embedded System Design - Course
2. <https://a.impartus.com/ilc/#/video/id/3404203>

Unit 2

Serial Communication, Direct Memory Access, Semiconductor Memory, Designing Low power systems, BUS architecture. Embedded Systems – the Software, Endian-ness, Data Alignment and Memory Banks, Peripheral I/O and Memory Mapped I/O, Load Store Architecture, Stack, FLAGS.

Pedagogy: Analytical Learning through NPTEL videos, illustrative case problems

Recommended Resources / Links:

1. DMA Introduction: Master – Slave Communication | Free Video Tutorial | Udemy
2. <https://a.impartus.com/ilc/#/video/id/3510844>

Unit 3

The Architecture of ARM 7, ARM 7 architecture, Interrupts and Exceptions, ARM7 pipeline, Advanced Features. Assembly Programming of ARM7, Embedded program development, ARM7 Instruction set.

Pedagogy: Assembly programming learning skills and algorithm tracing

Recommended Resources / Links:

1. <https://www.udemy.com/course/armv8-exception-level1/>
2. <https://a.impartus.com/ilc/#/video/id/3542117>

Laboratory Session: Part A 1-5 programs.

Unit 4

Assembly Language Programming, Accessing Memory, Programming of ARM7 using C, ARM7 SOC.

Pedagogy: Assembly programming in high level language learning skills for embedded systems

Recommended Resources / Links:

1. Microcontroller Embedded C Programming: Absolute Beginners | Udemy
2. <https://a.impartus.com/ilc/#/course/1259590/1112>

Laboratory Session: Part A 6-12 Programs and Part B 1-5 Programs

Unit 5

Architecture of ARM Cortex-M, Cortex-M Processors, Cortex-M0, Modes and States, Programming Model, Memory Model, Nested Vector Interrupt Controller, Power management using sleep modes.

Pedagogy: Conceptual Learning using NPTEL video lectures for cortex systems

Recommended Resources / Links:

1. Microprocessors and Microcontrollers: Arm Cortex-M0+ (using RP2040) – NPTEL+
2. <https://a.impartus.com/ilc/#/course/1259590/1112>

Laboratory Session: Part B 6-9 Programs

Self-Learning:

Course-Project: Develop and Embedded system application using Raspberry Pi OR Arduino OR Nuvoton boards for to showcase real time working principle.

MICROCONTROLLER LAB

Part A

1. a. ALP to add first 10 odd numbers. Store sum in register.
b. ALP to compute sum of squares of 5 numbers starting from 1. Write and use procedure SQU. Store sum in register.
2. a. ALP to add the first n even numbers. Store the result in a memory location.
b. ALP to generate a geometric progression with a limit n. Display the results in memory.
3. a. ALP to count the number of zeroes and ones in a binary number.
b. ALP to find the average of ten 16-bit numbers stored in memory.
4. a. ALP to find the factorial of a number.
b. ALP to generate the first n Fibonacci numbers.
5. ALP to find the sum of digits of a number.
6. ALP to convert BCD number to binary.
7. ALP to select a set of r objects from a set of n objects without considering the order of elements in a selection using combination method.

8. ALP to select a set of r objects from a set of n objects considering the order of elements in an arrangement using permutation method.
9. ALP to implement Bubble Sort on an array of integers.
10. ALP to implement Binary Search on an array of integers.
11. ALP to check whether the given number is palindrome.
12. ALP to count the number of times a substring is repeated in the string.

Part B

1. C program to toggle the lowest pin of Port 0 with a delay between the two states. Observe and record the waveform obtained using the Logic Analyzer in the Keil simulator.
2. C program to generate an asymmetric square wave of 120Hz and having a duty cycle of 25% using the Timer0 module.
3. C program to generate a square wave using Timer0 in the interrupt mode.
4. C program to make a LED glow at different brightness levels (low to high) with brightness levels varying over duration of 2s. Demonstrate using logic analyzer window.
5. C program to display the string 'I LOVE ISE' in the serial window of UART1

Text Books:

1. Andrew Sloss, Dominic Symes, Chris Wright, "ARM System Developer's Guide – Designing and Optimizing System Software", Elsevier Publication 2012.
2. Lyla B Das, "Architecture, Programming, and Interfacing of Low-power Processors – ARM7, Cortex-M", Cengage Learning India Pvt. Ltd. 2017.

Reference Books:

1. F. Vahid and T. Givargis, "Embedded System Design: A Unified Hardware/Software Introduction", Wiley India Pvt. Ltd., 2002.
2. A.N. Sloss, D. Symes and C. Wright, "ARM System Developer's Guide: Design and Optimizing System Software", Morgan Kaufman Publishers, 2004.

Course Outcomes:

1. Understand the basics of embedded processors and operating system for different application scenarios (PO1, PSO2)
2. Describe the building blocks that contribute to the software aspects of embedded system design. (PO1, PO2, PO3, PSO1, PSO2)
3. Design ARM7 programs that includes interrupt structure and pipeline. (PO1, PO2, PO3, PO5, PSO1, PSO2)
4. Develop ARM7 assembly code for a given problem (PO1, PO2, PO3, PO5, PSO1, PSO2)

5. Compare Cortex-M processors in terms of architecture, memory model and interrupt structure
(PO1, PO2, PO3, PO5, PSO-2)

Course Assessment and Evaluation:

Continuous Internal Evaluation: 50 Marks		
Assessment Tool	Marks	Course Outcomes addressed
Internal test-I	30	CO1, CO2, CO3
Internal test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other components	Marks	Course Outcomes addressed
Course project	10	CO1, CO2, CO3, CO4, CO5
Lab test and Record	10	CO1, CO2, CO3, CO4, CO5
Semester End Examination	100	CO1, CO2, CO3, CO4, CO5

Design and Analysis of Algorithms	
Course Code: IS43	Credits: 3:0:0
Pre – requisites: NIL	Contact Hours: 45L+45S
Course Coordinator: Krishna Raj PM	

Course Contents

Unit 1

Foundations of Algorithms: Role of Algorithms in Computing, Growth of Functions, Asymptotic Notation, Analyzing Algorithms, Standard Notations and Common Functions. Divide-and-Conquer: Recurrences, Substitution Method, Recursion-Tree Method, Master Method. Probabilistic Analysis and Randomized Algorithms: Indicator Random Variables, Randomized Quicksort, Randomized Algorithms for Matrix Operations.

Pedagogy: Conceptual Learning using NPTEL video lectures and problem-solving sessions.

Recommended Resources / Link: <https://nptel.ac.in/courses/106/101/106101060>

Unit 2

Sorting and Order Statistics: Heaps and Heapsort, Priority Queues, Quicksort in detail, Sorting in Linear Time (Counting Sort, Radix Sort, Bucket Sort), Medians and Order Statistics: Selection Algorithms and their Analysis.

Pedagogy: Analytical Learning through NPTEL videos, illustrative case problems, and algorithm tracing.

Recommended Resources / Link: <https://nptel.ac.in/courses/106/101/106101060>

Unit 3

Data Structures for Advanced Algorithms: Elementary Data Structures review, Hash Tables (Chaining, Open Addressing, Universal Hashing), Binary Search Trees, Red-Black Trees, Augmenting Data Structures. Amortized Analysis: Aggregate Analysis, Accounting Method, Potential Method.

Pedagogy: Visualization-based Learning with animated NPTEL videos and hands-on paging examples.

Recommended Resources / Link: <https://nptel.ac.in/courses/106/101/106101060>

Unit 4

Advanced Design Techniques: Dynamic Programming (Matrix Chain Multiplication, Longest Common Subsequence, Optimal Binary Search Trees). Greedy Algorithms (Activity Selection, Huffman Codes, Minimum Spanning Trees using Kruskal and Prim, Dijkstra's Algorithm).

Pedagogy: Structure-oriented Learning using NPTEL lectures and whiteboard implementation exercises.

Recommended Resources / Link: <https://nptel.ac.in/courses/106/101/106101060>

Unit 5

Graph Algorithms and Complexity: Graph Traversal (BFS, DFS, Topological Sort, Strongly Connected Components), Shortest Paths: Bellman-Ford, Dijkstra revisited, Floyd-Warshall, Johnson's Algorithm. Maximum Flow (Ford-Fulkerson, Edmonds-Karp). Computational Complexity: Introduction to P, NP, NP-Completeness, Approximation Algorithms.

Pedagogy: Real-world Case-based Learning with NPTEL content and practical scenario discussions. **Recommended Resources / Links:** <https://nptel.ac.in/courses/106101060>

Self-Learning:

Case Study: Analyze the use of a greedy algorithm in a real-world application like GPS navigation. Examine a scenario where an inefficient algorithm caused problems and propose a better solution.

Project Based Learning: Create a visualizer tool to demonstrate how sorting algorithms work. Build a simple recommendation engine using graph algorithms like BFS or DFS.

Simulation: Simulate Kruskal's Algorithm to find a minimum spanning tree in a network. Use a simulation to visualize the execution of a backtracking algorithm like the N-Queens Problem.

Text Books:

1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, "Introduction to Algorithms," Fourth Edition, MIT Press, 2022.

Reference Books:

1. Jon Kleinberg, Éva Tardos, "Algorithm Design," 2nd Edition, Pearson, 2022
2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, "Data Structures and Algorithms", Pearson Education, Reprint 2006.

Course Outcomes:**At the end of the course, the student will be able to:**

1. Analyze algorithms using asymptotic notation, recurrences, and probabilistic tools. *(PO1, PO2, PO4, PSO1)*
2. Apply sorting, selection, and searching techniques efficiently. *(PO1, PO3, PO5, PSO1)*
3. Employ advanced data structures and amortized analysis to optimize algorithms. *(PO1, PO3, PO5, PSO1)*
4. Implement algorithmic design paradigms such as dynamic programming and greedy methods. *(PO1, PO3, PO5, PSO1)*
5. Apply graph algorithms, flow techniques, and complexity concepts to real-world computational problems. *(PO2, PO4, PO11, PSO1)*

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Quiz	10	CO1, CO2, CO3, CO4, CO5
Simulation	10	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

DATABASE MANAGEMENT SYSTEMS	
Course Code: IS44	Credits: 3:0:0
Pre – requisites: Nil	Contact Hours: 45L+45S
Course Coordinator: Dr. Savita K Shetty	

Course Contents

Unit 1

Introduction to DBMS: Introduction, Characteristics of database approach, Actors on the scene, Workers behind the scene. Advantages of using DBMS approach. When not to use DBMS.

Database System Concepts: Data Models, Schemas and Instances, Three-schema architecture and data independence. Database languages and interfaces; Classification of Database Management systems.

Entity Relationship Model: Using High Level conceptual data for database design, an example database application. Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types. Refining the ER Design; ER Diagrams, naming conventions and design issues.

Pedagogy/Course delivery tools: Chalk and talk, Power Point Presentation.

Recommended Resources / Links:

1. <https://www.youtube.com/watch?v=OWX4RvijwLw&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=4>
2. <https://www.youtube.com/watch?v=rrG7azSlyWI&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=4>

Unit 2

Relational Model and Relational Algebra: Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations.

Unary relational Operations select and project. Relational algebra operations from set theory. Binary relational operations, join and division. Additional relational operations example of queries in relational algebra. Relational Database Design using ER- to-Relational Mapping.

Pedagogy/Course delivery tools: Chalk and talk, Power Point Presentation.

Recommended Resources / Links:

- <https://www.youtube.com/watch?v=DRSog3SA4Y&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=5>

Unit 3

SQL Data Definition and Data Types: The create table command in SQL, attribute data types and domains. Specifying basic attribute constraints and defaults in SQL; Specifying key and referential integrity constraints. Schema change statements in SQL; DROP command and Alter Command. Basic queries in SQL: The select from where structure of basic SQL queries, Unspecified where clause and use of the asterisk, Aliasing, Substring Pattern Matching and arithmetic Operators, Ordering of query results. Complex SQL Queries: Comparisons Involving null and three valued logics, nested queries, the exists and unique functions in SQL. Joined tables in SQL. Aggregate functions, Group by and having clauses. Insert, Delete and Update statements in SQL.

Pedagogy/Course delivery tools: Chalk and talk, Power Point Presentation.

Recommended Resources / Links:

1. <https://www.youtube.com/watch?v=w1XdPholzWY&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=6>
2. <https://www.youtube.com/watch?v=ywUn5qNmxNo&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=7>

Unit 4

Database Design: Informal Design Guidelines for Relation Schemas, reducing the null values in tuples, disallowing the possibility of generating the spurious tuples. Definition of Functional Dependencies, inference rules for functional dependencies. Normal Forms Based on Primary Keys-1NF, 2NF, 3NF, BCNF with examples. Codd rules.

Pedagogy/Course delivery tools: Chalk and talk, Power Point Presentation.

Recommended Resources / Links:

1. <https://www.youtube.com/watch?v=K5jqNjnE-pE&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=16>
2. <https://www.youtube.com/watch?v=9-uqoJK6KPc&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=17>

Unit 5

Introduction to Transaction Processing: Single user versus multi user transactions, Read and Write operations. Transaction and System Concepts, Desirable properties of Transactions, Transaction Support in SQL, Need of concurrency control and recovery. Two-phase Locking Techniques for Concurrency Control, Recovery techniques based on Deferred Update, Recovery techniques based on Immediate Update.

Introduction to NoSQL: Why NoSQL? characteristics and types of NoSQL database. Use of NoSQL in industry, SQL versus NOSQL.

Introduction to MongoDB: What is MongoDB? Why? Data Types and introduction to MongoDB Query Language.

Pedagogy/Course delivery tools: Chalk and talk, Power Point Presentation.

1. Recommended Resources / Links:

https://www.youtube.com/watch?v=TyT_MuPHG3g&list=PLIwC9bZ0rmjSkM1VRJROX4vP2YMIf4Ebh&index=31

2. <https://www.mongodb.com/resources/basics/databases/nosql-explained>

Text Books:

1. Ramez Elmasri and Shamkant B. Navathe: Fundamentals of Database Systems, 7th Edition, Addison-Wesley, 2016.
2. Benjamin Rosenzweig, Elena Silvestrova Rakhimov: Oracle PL/SQL by Example, 6th edition, 2023.

Reference Books:

1. Silberschatz, Korth and Sudharshan: "Data base System Concepts, Seventh Edition, Mc-GrawHill, 2019".
2. Raghu Ramakrishnan, Johannes Gehrke, "Database Management Systems, Third Edition", McGraw-Hill, 2003.
3. Arek Borucki "MongoDB 8.0 in Action 3rd Edition" 2025

Self-Learning (Case Study/ Project Based Learning): Students are required to work in teams of up to four members to complete a team-based project. The project must include both the development of a working database application and the submission of a project report for demonstration and evaluation purposes.

Each team should select a case study and follow the steps below to design and implement their application:

1. Collect Data Requirements
2. Gather Functional Requirements
3. Design the Entity-Relationship (ER) Model
4. Convert the ER Model to a Relational Schema and Normalize the Design

Course Outcomes:

At the end the course students will be able to:

1. Design Entity Relationship model for the given database problem. (PO1, PO2, PO3, PO9, PO10, PO11, PSO1, PSO-3)
2. Develop relational model from the given Entity Relationship diagram. (PO1, PO2, PO3, PO9, PO10, PO11, PSO1, PSO3)
3. Design the relational database schema by applying normalization techniques. (PO1, PO2, PO3, PO9, PO10, PO11, PSO1, PSO3)
4. Apply query language to perform database operations. (PO1, PO2, PO3, PO5, PO9, PO10, PO11, PSO1, PSO3)
5. Understand the concepts of transaction processing, concurrency control and recovery techniques. (PO1, PO11, PSO1, PSO3)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
Mini Project –Phase-1-Demo/Quiz	10	CO1, CO2, CO3,
Mini Project –Phase-2-Demo/Quiz	10	CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

ADVANCED JAVA	
Course Code: IS45	Credits: 3:0:0
Pre – requisites: Principles of Programming using C	Contact Hours: 45L+45S
Course Coordinator: Mrs Evangeline D	

Course Content

Unit I

Java Basics : Classes, Object, Constructors, Method overloading, Understanding Static, final, Inheritance-Super, Method Overriding, Dynamic Method Dispatch, Abstract Classes, Using Final. Packages and Interfaces- Defining, Implementing . Access Protection. Exception Handling- try-catch, throw, throws, finally. Built-in Exceptions, Creating Exception classes and Chained Exceptions

Pedagogy: Demo, Chalk and Talk.

Links:

- 1.<https://www.youtube.com/watch?v=VksxhzfD8kQ>
- 2.https://www.youtube.com/watch?v=4wZ_3oLoYiY

Unit II

String Handling: String Constructors, String Length, String Operations, changing case of characters, joining strings, string methods, Character Extraction, Searching Strings, Modifying Strings, Data conversions, StringBuffer. Type wrappers, Autoboxing

Lambda Expressions: Fundamentals, Functional Interfaces, block lambda expressions.

Multithreaded Programming : The Java Thread Model, The main thread, Creating a thread, Creating multiple threads, Using isAlive() and join()

Pedagogy: Demo, Chalk and Talk.

Links:

- 1.<https://www.youtube.com/watch?v=5NOLuoG6fcQ>
- 2.https://www.youtube.com/watch?v=IYuj9nn0PBU&list=PLfn3cNtmZdPOe3R_wO_h540QNfMkCQ0ho&index=30

Unit III

Collections: Collection Interfaces, Collection classes, Accessing a collection via an Iterator, Spliterator Storing user defined classes in Collections, Working with Maps, Sets, Comparators and Comparable Generics<T>: Introduction to Java Generics, Implementing Generics, Generic Methods and Interfaces

Pedagogy: Demo, Chalk and Talk.

Links: 1.https://www.youtube.com/watch?v=6rYOyIGfy3w&list=PLfn3cNtmZdPOe3R_wO_h540QNfMkCQ0ho&index=27

2. <https://www.youtube.com/watch?v=K1iu1kXkVoA>

Unit IV

Introducing Swing – The Swing packages, Event handling, Exploring Swing. **Working with Databases –** JDBC Drivers and Architecture, Accessing Databases,

Pedagogy: Demo, Chalk and Talk.

Links:

1. https://www.youtube.com/watch?v=ajhWv31oN1k&list=PLfn3cNtmZdPOe3R_wO_h540QNfMkCQ0ho&index=50
2. https://www.youtube.com/watch?v=mQj34vUhpts&list=PLfn3cNtmZdPOe3R_wO_h540QNfMkCQ0ho&index=43

Unit V

Java Servlets – Introduction, Servlet API and Life Cycle, JavaServer Pages Technology - What Is a JSP Page? The Life Cycle of a JSP Page, Creating Static Content, Creating Dynamic Content, Scripting in JSP Pages - Declarations, Scriptlets, Expressions

Pedagogy: Demo, Chalk and Talk.

Links:

1. <https://www.youtube.com/watch?v=7AljcZMo-V4>
2. <https://www.youtube.com/watch?v=OuBUUkQfBYM>

Text Books:

1. Herbert Schildt, Java: the Complete Reference, 12th edition, McGrawHill, , 2023.
2. Sharanam Shah, Vaishali Shah, JavaEE 7 for Beginners, Shroff Publishers, 2018.
3. Eric Armstrong, Jennifer Ball. Stephanie Bodoff, Debbie Bode Carson, Ian Evans, Dale Green, Kim Haase Eric Jendrock, J2EE 1.4 Tutorial, O'Reilly, 2005.

Reference Books:

1. Christian Ullenboom, Java: The Comprehensive Guide, Shroff Publishers, October, 2022

Self-Learning: Programming Test and GATE oriented aptitude test.

Course Outcomes:

At the end of the course, the student will be able to:

CO1: Apply basic Java concepts for various applications. (PO - 1, 2, 3, 4, 5 & PSO - 3)

CO2: Identify methods of Strings, type wrappers and Collection classes for applications (PO - 1, 2, 3, 4, 5 & PSO - 3)

CO3: Implement applications using Maps, Generics, Lambda and multithreading concepts (PO 1, 2, 3, 4, 5- & PSO - 3)

CO4: Develop programs using Swing and JDBC (PO 1, 2, 3, 4, 5 & PSO - 3)

CO5: Develop dynamic web pages using Servlets or JSP (PO -1, 2, 3, 4,5 & PSO - 3)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE) : 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test-I	30	CO1, CO2, CO3
Internal Test-II	30	CO3, CO4, CO5
Average of the two internal tests shall be taken for 30 marks.		
Other Components		
MCQ Test	10	CO1, CO2, CO3, CO4, CO5
Programming Test	10	CO1, CO2, CO3, CO4, CO5
Semester-End Examination (SEE)	100 (Scale down to 50 Marks)	CO1, CO2, CO3, CO4, CO5

Design and Analysis of Algorithms Laboratory	
Course Code: ISL46	Credits: 0:0:1
Pre – requisites: NIL	Contact Hours: 30P
Course Coordinator: Krishna Raj	

Course Contents

General Instruction:

For each experiment, students are required to design and implement the algorithm, demonstrate the working through step-by-step tracing on sample input and evaluate its performance by analyzing the time complexity.

1. An online retail platform must arrange thousands of customer orders by order ID before shipping. Design an efficient sorting approach using arrays, ensuring stable ordering for large datasets.
2. A courier service wants to optimize package sorting for delivery by randomizing the partitioning step to avoid worst-case delays. Use array-based random partitioning to achieve efficient average performance.
3. An airline system maintains passenger boarding priorities based on ticket class and time of check-in. Implement a priority queue using a binary heap to order passengers for boarding efficiently.
4. An exam evaluation system needs to quickly sort thousands of student marks, all within the fixed range of 0 to 100. Apply a linear-time counting technique using arrays to produce the sorted list.
5. A hospital analytics dashboard requires finding the median patient waiting time from thousands of entries recorded daily. Use a selection procedure on an unsorted array to determine the median in guaranteed linear time.
6. A social networking platform must efficiently track friend groups as users form new connections. Implement a disjoint-set data structure with union by rank and path compression to dynamically manage merging groups.
7. A city navigation system computes the shortest routes between intersections for thousands of vehicles. Implement a graph representation with adjacency lists and use a heap-based priority queue optimized by Fibonacci heaps to improve shortest path calculations.
8. A video processing engine must determine the most efficient sequence for multiplying a chain of matrices representing video transformations. Use dynamic programming with a tabular approach to minimize the total number of scalar multiplications.
9. A plagiarism detection system compares two student essays to find the longest matching sequence of words. Use dynamic programming with a two-dimensional table to compute the longest common subsequence between the two text strings.
10. A telecom service provider compresses text messages to reduce transmission costs. Construct a binary tree based on character frequencies and apply a greedy encoding strategy to generate efficient prefix codes for the text.
11. A file management system must explore all files and folders in a directory structure to build dependency maps. Model the directory as a graph and traverse it using depth-first search to record discovery and finishing times.
12. A city water supply network distributes water from a main reservoir to multiple zones through pipelines of limited capacity. Model the network as a directed flow graph and compute the maximum possible water flow from source to sink.

Pedagogy: The reasoning-based, structured, and problem-oriented, aiming to build a deep conceptual understanding of algorithms rather than surface-level.

2. Alfred V. Aho, John E. Hopcroft and Jeffrey D. Ullman, "Data Structures and Algorithms", Pearson Education, Reprint 2006.

Course Outcomes: At the end of the course, the student will be able to:

1. Design the experiment for the given problem using various standard algorithmic techniques. (PO1, PO2, PO3, PO9, PO10, PSO-1)
2. Develop the solution for the given real world problem. (PO1, PO2, PO3, PO4, PO9, PO10, PSO1)
3. Analyze the results and produce substantial written documentation (PO1, PO2, PO4, PO9, PO10, PSO1)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3

Conduction, Calculation, Record and Viva	30	CO1, CO2, CO3
Semester-End Examination (SEE)	50	CO1, CO2, CO3

DATABASE MANAGEMENT SYSTEMS LAB	
Course Code: ISL47	Credits: 0:0:1
Pre – requisites: Nil	Contact Hours:30P
Course Coordinator: Dr. Savita K. Shetty	

List of Experiments:

Part A

1. Consider an Employee with a social security number (SSN) working on multiple projects with definite hours for each. Each Employee belongs to a Department. Each project is associated with some domain areas such as Database, Cloud and so on. Each Employee will be assigned to some project. Assume the attributes for Employee and Project relations.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the tables, insert suitable tuples and perform the following operations in SQL i. Obtain the details of employees assigned to “Database” project.
 - ii. Find the number of employees working in each department with department details.
 - iii. Update the Project details of Employee bearing SSN = #SSN to ProjectNo = #Project_No and display the same.

2. Consider the relations: PART, SUPPLIER and SUPPLY. The Supplier relation holds information about suppliers. The attributes SID, SNAME, SADDR describes the supplier. The Part relation holds the attributes such as PID, PNAME and PCOLOR. The Shipment relation holds information about shipments that include SID and PID attributes identifying the supplier of the shipment and the part shipped, respectively. The Shipment relation should contain information on the number of parts shipped.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the above tables, insert suitable tuples and perform the following operations in Oracle SQL:
 - i. Obtain the details of parts supplied by supplier #SNAME.
 - ii. Obtain the Names of suppliers who supply #PNAME.
 - iii. Delete the parts which are in #PCOLOR.

3. Consider the relations BOAT, SAILOR and RESERVES. The relation BOAT identifies the features of a boat such as unique identifier, color and a name. The list of sailors with attributes such as SailorID, name, age etc., are stored in the relation SAILOR. The sailors are allowed to reserve any number of boats on any day of the week and the records are to be updated in the RESERVES table.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the tables, insert suitable tuples and perform the following operations in SQL:
 - i. Obtain the details of the boats reserved by ‘#Sailor_Name’.
 - ii. Retrieve the BID of the boats reserved necessarily by all the sailors.
 - iii. Find the number of boats reserved by each sailor. Display the Sailor_Name along with the number of boats reserved.

4. Consider the Banking database – CUSTOMER, BRANCH, ACCOUNT and TRANSACTION. An account can be a savings account or a current account. Customer can have both types of accounts. The transactions can be a deposit or a withdrawal.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the above tables, insert suitable tuples and perform the following operations in SQL:
 - i. Obtain the details of customers who have both Savings and Current Account.
 - ii. Retrieve the details of branches and the number of accounts in each branch.

- iii. Obtain the details of customers who have performed at least 3 transactions.
 - iv. List the details of branches where the number of accounts is less than the average number of accounts in all branches.
- 5 Consider the Book Lending system from the library- BOOKS, STUDENT, BORROWS. The students are allowed to borrow any number of books on a given date from the library. The details of the book should include ISBN, Title of the Book, author, and publisher. All students need not compulsorily borrow books.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the above tables, insert suitable tuples and perform the following operations in SQL:
 - i. Obtain the names of the student who has borrowed either book bearing ISBN '123' or ISBN '124'.
 - ii. Obtain the Names of female students who have borrowed "Database" books.
 - iii. Find the number of books borrowed by each student. Display the student details along with the number of books.
 - 6 Consider the Hospital management system with Patient, Doctor and Appointment. Patient relation holds the Patient ID, Name, Age, Gender. Doctor relation describes with Doctor ID, Name, Specialization Each patient has given appointment with some doctor on specific date.
 - a) Mention the constraints neatly.
 - b) Design the ER diagram for the problem statement
 - c) State the schema diagram for the ER diagram.
 - d) Create the above tables, insert suitable tuples and perform the following operations in Oracle SQL:
 - i. Retrieve the details of doctors consulted by '#Patient_Name'.
 - ii. Find the DoctorIDs of doctors consulted by **all patients**.
 - iii. For each patient, find the number of doctors consulted. Display Patient_Name with the count.
 - 7 a) Create an Employee and Department tables, insert suitable tuples and perform the following operations using MongoDB
 - i. List all the employees of Department named #Dept_name
 - ii. Name the employees working on Project Number :#Project_No
 b) Write a program that gives all employees in Department #number a 15% pay increase. Display a message displaying how many employees were awarded the increase.
 - 8 a) Create Patient and Doctor collections, insert suitable documents, and perform the following operations using MongoDB:
 - i. List all the patients treated by the doctor named #Doctor_Name.
 - ii. Display the names of patients who have an appointment on date #Appointment_Date.
 b) Write a program that increases the consultation fee of all doctors in specialization #Specialization by 20%. Display a message showing how many doctors were updated.
 - 9 a) Create the table, insert suitable tuples and perform the following operations using MongoDB
 - i. Update the details of parts for a given part identifier: #PID.
 - ii. Display all suppliers who supply the part with part identifier: #PID.
 b) Write a PL/SQL program to copy the contents of the Shipment table to another table for maintaining records for specific part number.
 - 10 a) Create the table, insert suitable tuples and perform the following operations using MongoDB.
 - i. Obtain the number of boats obtained by sailor :#Sailor_Name
 - ii. Retrieve boats of color :'"#color"'
 b) Consider the following relation schema.
 EMPLOYEE (SSN, Name, sal, DeptNo)
 Write a trigger to raise an error if the table is modified on a specific day (Eg., Saturday or Sunday) of the week.

- 11 a) Create the tables Customer and Branch, insert suitable tuples and perform the following operations using MongoDB
 - i. Find the branch name for a given Branch_ID.
 - ii. List the total number of accounts for each customer.
- b) Using cursors demonstrates the process of copying the contents of one table to a new table.
- 12 a) Create the table, insert suitable tuples and perform the following operations using MongoDB
 - i. Obtain the book details authored by “author_name”.
 - ii. Obtain the Names of students who have borrowed “Database” books.
- b) Create a program that accepts two numbers. If the first is larger than the second raise an exception called e_bigger and display an appropriate message.

Part B

Mini Project

Students are required to work in teams of up to four members to complete a team-based project. The project must include both the development of a working database application and the submission of a project report for demonstration and evaluation purposes.

Each team should select a case study and follow the steps below to design and implement their application:

5. Use SQL for Data Definition:
 - o Create tables based on the relational schema
 - o Populate the tables with sample data
6. Use SQL for Data Manipulation
7. Create Views and Triggers using SQL
8. Execute Basic SQL Queries
9. Write and Execute Complex SQL Queries
10. Design and Implement a Front-End Interface for the application

Text Books:

1. Ramez Elmasri and Shamkant B. Navathe: Fundamentals of Database Systems, 7th Edition, Addison-Wesley, 2016.
2. Benjamin Rosenzweig, Elena Silvestrova Rakhimov: Oracle PL/SQL by Example, 6th edition, 2023.

Reference Books:

1. SQL/PLSQL –The programming Language of Oracle by Evan Byrass 4TH Edition BPB publication 2009

Course Outcomes:

At the end of the course the student will be able to:

1. Develop relational database schema by using data definition language utilities. (PO1, PO2, PO3, PO4, PO5, PO9, PO10, P11, PSO1, PSO3)
2. Develop solutions to the broad range of query and data update problems using SQL/MongoDB, (PO1, PO2, PO3, PO4, PO5, PO9, PO10, P11, PSO1, PSO3)
3. Implement programmatic components for a database using PLSQL (PO1, PO2, PO3, PO4, PO5, PO9, PO10, PO11, PSO1, PSO3)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3
Other Components		
Conduction, Project Work, Record and Viva	30	CO1, CO2, CO3
Semester-End Examination (SEE)	50	CO1, CO2, CO3

ADVANCED JAVA LAB	
Course Code: IS48	Credits: 0:0:1
Pre – requisites: Nil	Contact Hours: 30P
Course Coordinator: Mrs. Evangeline D	

Course Content

List of Experiments

- Write a Java Program for the following Payroll System. Create a package called PayrollManagement. Define an interface Payable with a method calculate(). Create a super class called Employee with the following data members name, age, salary and designation. Use a parameterised constructor to initialize all the data members. The Employee class is inherited in three sub-classes namely FullTime, PartTime and Intern and these subclasses implement the Payable interface. Full-Time Employee receives monthly salary and Part-Time Employee receives hourly wages. Intern takes a fixed stipend. Create another package “Company” and import these classes to complete the payroll system. Create an array of Employee objects.
- Create a Queue class and implement enqueue, dequeue and display operations. Create Custom Exceptions to handle Queue Overflow and Queue Underflow.
- Define a package named stringoperations to encapsulate the string processing functionality. Create an interface named StringManipulator with at least eight methods for string operations:
 - String reverse(String input): Reverses the given string.
 - String toUpperCase(String input): Converts the string to uppercase.
 - String toLowerCase(String input): Converts the string to lowercase.
 - String concatenate(String str1, String str2): Concatenates two strings.
 - int countVowels(String input): Counts the number of vowels in the string.
 - int wordCount(String input): Counts the number of words in the string.
 Implement the interface in a class named StringProcessor within the stringoperations package, providing concrete implementations for all methods.
 Create a main class in a separate package application, where:
 - An object of StringProcessor is created.
 - The user is prompted to enter a string.
 - Each method of the interface is tested and its output is displayed.
- Create a Palindrome Checker program using StringBuffer that verifies if a given string is a palindrome. The program should implement user-defined exception handling for the following:
 If the input string contains non-alphabetical characters, throw a custom exception InvalidInputException.
 If the string length is less than 3 characters, throw a custom exception ShortStringException.
 If the string is a palindrome (irrespective of the case), print a message indicating that it is a palindrome.
 If the string is not a palindrome, print a message indicating that it is not a palindrome.
- Create a Password Security Application in Java that takes a user's password as input and performs the following operations .
 - Check if the password contains at least one uppercase letter, one lowercase letter, and one digit.
 - Count the number of special characters in the password.
 - Mask the password by replacing all characters with * (except the first and last character).
 - Reverse the password and display it (for security encryption demonstration).
 - Append a random security token (e.g., "@123!") to the password.
 - Replace all vowels (a, e, i, o, u) with # to make it difficult to read.

6. Write a Program that simulates a telephone that records missed incoming calls. For each missed call, store the time of call, telephone number of origin, and name of the caller if the name is available. For unlisted numbers, set the name to “private caller”. Choose or extend the most appropriate collection class and provide the following features.
 - a. Numbers are recalled in the order they arrive
 - b. Up to 3 numbers are recorded. When the fourth call comes in, it is stored and the oldest call is deleted so that no more than 3 numbers are ever recorded.
 - c. After each number display, the user can
 - i. Identify whether the number has to be deleted or not
 - ii. To display the call details (number, caller name and time).

Delete the list of numbers specified by the user as in i.

Write a helper class to represent an incoming call with fields to hold the number, name of the caller, and time of the call. Write a tester call that stores the several numbers, simulate the user pressing the missed-calls button, and finally prints the entire collection of stored calls.
7. Write a Java program using user-defined storage classes to create a book database and store it in a Collection List.
 - a. Books collection should include title, author, publisher and price.
 - b. Write a method to sort the books in ascending order of price and store it in another List. Maintain the book details with respect to a unique book id.
 - c. Prompt for an author name and list all the books with the same author name. Create a new list holding all the book details with price greater than a user specified price.
8. Write a program to create generic Stack class with push(), pop(), clear(), isEmpty() and display() methods. Demonstrate creating Stack of String and Integer objects.
9. Create a desktop java application using swings to enable a user to enter student information such as name, usn, age, address, sgpa of 4 semesters, category.
 - a. Perform validations on all the fields. Display appropriate messages in pop up boxes to indicate wrong entries.
 - b. On clicking of the “compute” button, find the cgpa (Average of sgpas) . On clicking of the “done” button, place the student details (name, usn, age, address,cgpa, category) in a collection.
 - c. Display the collection in a textarea on the click of a “complete” button. Enable / Disable the visibility of “compute” and “done” buttons.
10. Write a java program using Swing to validate user login information using dialog boxes.
 - a. Once validated, allow the user to enter the customer id, if the person is a new customer, else check whether the customer exists in a collection and obtain the customer id.
 - b. The customer id can be obtained given a mobile number. Allow the user to enter the item purchased by giving the item id and quantity purchased.
 - c. On clicking of a button, the item name and the total cost should appear in the corresponding GUI components.
 - d. Using option dialog box, indicate the types of discount available for the customer. On clicking on the print button, print the details in information dialog box.
11. Write a program that uses Java Swing and JDBC to create a stand-alone application:
 - a. Create two tables namely, Representative (RepNo, RepName, State, Comission, Rate) and Customer (CustNo, CustName, State, Credit_Limit, RepNo) in MySQL database. Use appropriate Swing components to insert values in a form.
 - b. Use another form to display Representative’s information when Credit_Limit is above 15,000.
12. Create a JSP based web application for purchasing a type of shirt from a list of shirts. Display a table giving the type of shirts and cost. With a drop down menu, select the type of shirt. Use radio-buttons to select the neck type of shirt (Round neck, V neck and collar).

In a textbox, enter the quantity. Include “compute” button that calculates the total cost of purchase done and displays the purchase details. Include appropriate labels.

Text Books:

2. Sharanam Shah, Vaishali Shah, JavaEE 7 for Beginners, Shroff Publishers, 2018.
3. Eric Armstrong, Jennifer Ball. Stephanie Bodoff, Debbie Bode Carson, Ian Evans, Dale Green, Kim Haase
Eric Jendrock, J2EE 1.4 Tutorial, O’Reilly, 2005.

Reference Books:

1. Christian Ullenboom, Java: The Comprehensive Guide, Shroff Publishers, October, 2022

Course Outcomes:

At the end of the course the student will be able to:

CO1: Apply Collection Framework Generics & Swings to solve given problem (PO - 1, 2, 3, 4, 5, & PSO - 3)

CO2: Apply JDBC concepts to work with structured data (PO - 1, 2, 3, 4, 5 & PSO - 3)

CO3: Apply JSP and Servlet to develop web applications (PO - 1, 2, 3, 4, 5 & PSO - 3)

Course Assessment and Evaluation:

Continuous Internal Evaluation (CIE): 50 Marks		
Assessment tool	Marks	Course outcomes attained
Internal Test	20	CO1, CO2, CO3
Other Components		
Conduction, Execution, Record and Viva	30	CO1, CO2, CO3
Semester-End Examination (SEE)	50	CO1, CO2, CO3
